FireCrypt is a powerful text encryption and decryption tool that allows you to encase a text block within an image, then decode it with the same password used for encryption. In addition, the application allows you to secure and encrypt text using the ENIGMA cipher algorithm. The program helps you encrypt text within an image and then decrypt it using the password created when the text block was encrypted. This can have a multitude of uses, as you can send secret messages without anyone observing them. For instance, you can casually send images to another person or friend, talking about the time you spent on holiday or on a trip. Knowing that someone might intercept your conversation or photos, you can easily attach secret messages to each image, using the photo's file name as password. The person receiving the photos can simply decrypt any attached message, while someone who intercepted your photos would not know about the messages they actually contain. Additionally, FireCrypt gives you the possibility to encrypt your text using the infamous ENIGMA algorithm. By selecting a password, you can seamlessly encrypt and decrypt text by parsing it through the ENIGMA cypher. This way, the output will seem a random and scrambled text, that can only be decrypted with the same password used for encryption. By using the application, you can send secret messages to others, in the form of images, as they remain visually unchanged, so anyone seeing them will have no clue on what they actually contain. This way, your secrets will be safe from prying eyes, and you can even store certain documents or login information in stock photos or default program images, as no one will think of searching a secret text within an image, yet alone within a picture that is supposed to be there. Customer Reviews: I very much appreciate the constant improvement of the program, which makes it a lot more useful and powerful. I can also recommend this software for people who want to stay hidden when browsing the net. (8) Team5, January 22, 2010 4:46 PM Good job I use this program every day to send secret text messages and photos to my friends. I had the old versions of the software for a couple of years and they were very slow, this one is much faster!
