Drag-and-drop functionality for QuarkXPress projects Once you reach the main window, you can access JoDrop from the "Utilities" menu. It gives you the possibility to create a list of images that can be opened with TextEdit, BBEdit or Microsoft Excel, as well as include the full path, image type and size, if necessary. The photos can be sorted by name, too. The plugin is also capable of swapping low-resolution and high-resolution image files by type. It can be instructed to search in the same folder or in "Layouts". After applying options, it tells you how many photos were swapped in the process. Furthermore, JoDrop has functions available for filling boxes proportionally and for renaming picture files. It warns you if you're about to use image type not useful for CMYK workflows.
