· Added `-XX:MaxPermSize` option for setting the maximum permitted size of the permanent generation of the Java virtual machine on your system. The default is 256MB. This option affects allocation for garbage collection. Setting this option reduces, but does not eliminate, the risk of an `OutOfMemoryError` occurring.

· Added `-XX:PermSize` option for setting the permanent generation size of the Java virtual machine on your system. The default is 256MB. This option affects allocation for garbage collection. Setting this option reduces, but does not eliminate, the risk of an `OutOfMemoryError` occurring.

· Added `-XX:+CheckHeapForGC` option for setting whether the Java virtual machine periodically checks the heap size to make sure it is large enough to hold all the temporary objects in the process, to make sure the process does not fail from an `OutOfMemoryError`.

· Added `-XX:+UseAdaptiveGC` option for setting whether the Java virtual machine performs adaptive garbage collection on the heap. The default is true. This option reduces the risk of `OutOfMemoryError` by determining when the heap is large enough to hold all the temporary objects in the process.

· Added `-XX:UseCodeCacheFlushingMode` option for setting whether the Java virtual machine flushes the code cache when allocating or loading objects. The default is true. This option reduces the risk of `OutOfMemoryError` by forcing the Java virtual machine to flush the code cache to avoid filling up the code cache with objects that are not needed. If the code cache flushing mode is not used, the Java virtual machine may still fill up the code cache, but the risk of `OutOfMemoryError` is greatly reduced.

· Added `-XX:+UseConcMarkSweepGC` option for setting whether the Java virtual machine uses the concurrent marking-sweep algorithm for garbage collection. The default is true. This option reduces the risk of

OutOfMemoryError by using a version of the marking-sweep algorithm that is not as aggressive as the version used by the serial version of the algorithm. · Added -XX:MinHeapFreeRatio option for setting the minimum percentage of free space on the heap to use when running the garbage collector. The default is 60%. · Added -XX:MaxHeapFreeRatio option for setting the maximum percentage of free space on the heap to use when running the garbage collector. The default is 50%. · Added -XX:+UseParNewGC option for setting whether
