The 2016 release of AutoCAD supports the Python programming language. AutoCAD LT 2016 is also compatible with the UML profile of the Autodesk Live Code service. Functionality AutoCAD is software that engineers use to design and create detailed drawings of everything from aircraft to automobiles, as well as manufacturing plants and other mechanical and structural components. History AutoCAD's earliest predecessors, including XNU (1978), Arktisto (1981), and Dimension (1983) were developed by the Defense Advanced Research Projects Agency (DARPA) for the design of large mechanical structures. AutoCAD was originally a part of AutoLISP (language is said to be a Lisp dialect). Later, the programming language was changed to Visual LISP, and then Visual Basic. The current release of AutoCAD is AutoCAD LT, which is built on a combination of ObjectARX, .NET and C++. AutoCAD is available as a stand-alone program or as a part of AutoLISP. The program is available on Microsoft Windows, OS X and Linux. AutoCAD LT is compatible with AutoCAD LT for Windows, except that only parts of the technical reference manual are supported. Adoption Most architects and engineers use AutoCAD. AutoCAD is also used by manufacturing engineers, civil engineers, and structural engineers. In 1982, the first release of AutoCAD (known as AutoCAD 80) was

capable of handling large scale drawings up to 100,000 inches. It was built upon the software XNU that was developed for the AS/400 system and can be likened to the transition from MS-DOS to Windows. Today, AutoCAD LT has support for up to 20 million inches and is aimed at creating 3D models in the field and sharing them with colleagues and customers via the internet. The first release of AutoCAD LT was released in 2007. AutoCAD is also used by the United States military for all kinds of drawings and design. AutoCAD is widely used by manufacturers of machine parts and equipment. In June 2010, Autodesk announced the purchase of a controlling share of Vectorworks for US\$1.65 billion. Vectorworks was an AutoCAD competitor that had been acquired by Autodesk in 2007. After the acquisition, the two products have since been co-branded as Autodesk Vector
