KMT2B locus amplification and nuclear truncation in gastrointestinal neuroendocrine tumors with high proliferative activity. Gastrointestinal neuroendocrine tumors (NET) comprise a heterogeneous group of neoplasms classified according to their proliferative activity. Recently, we observed frequent KMT2B (lysine methyltransferase 2B) overexpression in NET when

---

compared to non-neoplastic gastric mucosa. Because KMT2B has been involved in the regulation of proliferation in a variety of human cancers, we hypothesized that KMT2B overexpression in NET might be associated with biological markers of high proliferative activity. Hence, we analyzed the correlation of KMT2B expression with 10 biological parameters of high proliferative activity in three NET series (series 1 [n = 40], series 2 [n = 47], and series 3 [n = 20]). KMT2B

---

was found overexpressed in all three series. In series 1, KMT2B overexpression was strongly correlated with tumor size ( $>50$  mm,  $P = 0.0051$ ), tumor growth rate ( $>0.7$  cm/mo.,  $P = 0.0049$ ), Ki-67 labeling index  $>5\%$ , ( $P = 0.0004$ ), and mitotic count  $>14$  mitoses/20 high-power fields ( $P = 0.0152$ ). A significant correlation with a truncated pattern of normal heterochromatin ( $P = 0.0166$ ) was found in series 3. When adjusted on mitotic count (in series 1), KMT2B overexpression remained

---

significantly correlated with tumor size ( $P = 0.0002$ ), tumor growth rate ( $P = 0.0069$ ), and Ki-67 labeling index ( $P = 0.0117$ ). A significant association between truncated nuclear chromatin pattern and KMT2B overexpression ( $P = 0.0392$ ) was also observed in series 3. Altogether, these data suggest a correlation between KMT2B overexpression and the parameters of high proliferative activity in NET. KMT2B overexpression was more frequent in tumors with a truncated nuclear

---

chromatin pattern. 595 F.3d 1164 (2010) UNITED STATES of America, Plaintiff-Appellee, v. Jonathan J. GUIDO, Defendant-Appellant. No. 08-16317. United States Court of Appeals, Ninth Circuit. Submitted February 10, 2010.[]

Photoshop has a variety of brush options and other related brushes. The big question is which brush to use when? Here are some of the most common choices: Almost all Photoshop brushes are available as editable artboards. You can see and edit the brush properties on the brush artboard area. All the brushes are unsharped by default.

---

In some cases you may want to use a brush with a lot of blur. You can change the blending mode by clicking on the artboard area. A brush can be treated like an eraser to create interesting effects. The blending mode will determine the direction of the effect. You can use the Brush Tool to apply a brush to an artboard. Right click on the artboard and select "Create brush from scratch." A dialog box will open. The brush will be created there. You can use the Opacity Sliders on
